SUMMARY

Experienced Tableau BI Analyst with over 5+ years of hands-on expertise in transforming complex data into actionable insights using advanced dashboards and visual storytelling. Strong background in SQL and cross-functional collaboration, with a track record of delivering high-impact analytics in fast-paced environments. Adept at working with business stakeholders and engineering teams to build scalable data solutions.

EDUCATION

Master's in Data Science

University of Texas at Arlington

May 24

Arlington, TX

Bachelor's in Computer Science Engineering

Sathyabama University

May 19

Chennai, India

EXPERIENCE

Senior Data Analyst at Hamaara Technologies

May 24 - Present

- Built dashboards in Tableau using key metrics, calculations, and filters to help company leaders make better decisions.
- Brought together data from different sources (like SQL, Excel, and APIs) into Tableau to show everything in one place.
- Created clear and easy-to-understand visual stories to share insights with people who don't have a technical background.
- Improved dashboard speed by reducing data size, avoiding complex formulas, and filtering data early.
- Set up automatic dashboard updates and alerts so teams always had the latest information without doing it manually.
- Designed reusable templates and data structures to build dashboards faster and keep the look consistent.
- Cleaned and prepared data using Tableau Prep and SQL before creating visuals, ensuring it was accurate and ready.
- Worked with different teams to find the most important metrics that matched company goals and performance targets.
- Used tools like Git and Confluence to track changes and keep documentation organized.
- Built interactive dashboards that let users choose time periods, departments, or product types to explore data easily.

Research Analyst at University of Texas at Arlington

Jan 23 – May 24

- Designed and implemented ETL workflows using Informatica and Python to automate the ingestion of student and financial data across multiple departments.
- Developed scalable data models to support Tableau dashboards, enabling leadership to monitor enrollment trends, funding allocations, and academic performance metrics.
- Led the migration of legacy systems to a secure, cloud-based data architecture, enhancing scalability, performance, and compliance with data governance standards.
- Performed data validation and quality assurance using advanced SQL scripts; coordinated User Acceptance Testing (UAT) to ensure system reliability and data integrity.
- Partnered with cross-functional teams including academic and administrative stakeholders to gather business requirements and deliver impactful, data-driven solutions.
- Authored and maintained technical documentation, including user guides for Tableau reports and backend data pipelines to support ongoing analytics initiatives.

Senior Data Analyst at Alacriti Info Systems

Jan 21 - Jul 22

- Designed advanced Tableau dashboards for operational, liquidity, and regulatory reporting, enabling leadership to monitor KPIs in real time.
- Developed optimized SQL queries to aggregate and manipulate large datasets from AWS Redshift and Athena.
- Partnered with business stakeholders to translate analytical needs into intuitive data visualizations and reporting solutions.
- Automated end-to-end reporting pipelines and dashboard refresh workflows to support business-critical decisions.
- Applied statistical techniques to uncover trends, anomalies, and business opportunities from operational data.
- Led efforts to ensure data quality, validation, and governance across analytics platforms.
- Conducted deep-dive performance analyses to identify growth levers and operational bottlenecks.
- Streamlined dashboard development through reusable components and parameterized reporting.

- Improved dashboard responsiveness and load times by 30% through extract optimization and calculated field tuning.

Data Analyst at Amazon

May 19 - Jan 21

- Utilized SQL and Python to develop ETL pipelines and manage large datasets for business intelligence and reporting.
 - Automated reporting processes to improve accuracy and streamline data management.
 - Collaborated with cross-functional teams to analyze data patterns and recommend performance improvements.
 - Built and maintained data pipelines; performed data cleaning to ensure analytics accuracy.
 - Conducted exploratory data analysis (EDA) to uncover trends and support decision-making.
 - Delivered ad-hoc reports and insights aligned with strategic business goals.
 - Designed dashboards and data visualizations using Power BI and Tableau for clear communication of insights.
 - Participated in building, testing, and deploying automated data reporting systems.
 - Analyzed operational data to recommend efficiency improvements.
 - Ensured data integrity through validation and verification processes.
 - Developed automated ETL solutions that reduced processing time by 35%.
 - Created complex SQL queries to improve data accessibility and support reporting needs.
 - Partnered with business teams to define reporting requirements and deliver targeted ad-hoc reports.
 - Delivered impactful visualizations with Power BI to support leadership decision-making.
-

SKILLS

Languages: SQL, Python, Scala

Ecosystems: Hadoop, Spark, Iceberg, Trino, Airflow

Visualization: Tableau, Superset, QlikSense, Power BI, QuickSight

Cloud and Data Storage: AWS Console, S3, Redshift, Athena, DBeaver

Data Processing and Manipulation: Data Wrangling, ETL, Data transformations

Fraud Detection: Anomaly Detection, Predictive Modeling, Usage-based Billing Fraud

Reporting & Automation: BI tools, Automated Reporting Solutions, Dashboards

Statistical Analysis: Predictive Modeling, Statistical Methods, Data Analysis

Software Development: Code Reviews, Unit Testing, Continuous Integration

Collaboration and Communication: Cross-functional team collaboration, leadership communication

PROFESSIONAL PROJECTS

Enterprise ETL Migration

- Migrated 200+ legacy ETL workflows to Informatica PowerCenter and Snowflake, resulting in a 45% reduction in runtime and significant improvement in data delivery SLAs.

Student Data Analytics Platform

- Developed an end-to-end data pipeline using Informatica, SQL, and Tableau to analyze enrollment and financial aid trends, powering 20+ administrative dashboards for data-driven decision-making.

Payment Gateway Pipeline

- Engineered a secure and scalable ETL process for processing over 3 million financial transactions per month using Informatica and Oracle, ensuring high performance and data integrity.
-

ACADEMIC PROJECTS

Predictive Sales Forecasting Model

- Developed a predictive sales forecasting model for a retail company using historical sales, market trends, and customer behavior data.
- Forecasted future sales at both product and regional levels to support strategic planning.
- Improved inventory management by aligning production schedules with demand forecasts.
- Enabled data-driven marketing strategies to optimize promotional efforts.
- Achieved a 20% reduction in inventory costs by minimizing overstocking and enhancing operational efficiency.

Fraud Detection & Prevention System

- Designed and implemented a real-time fraud detection system for an e-commerce platform.
- Utilized statistical analysis and machine learning to identify and classify high-risk user behavior and transactions.
- Integrated the detection system into existing workflows to enable timely alerts for fraud prevention teams.
- Reduced fraudulent activities by 30% within the first six months of deployment.
- Enhanced overall platform security and minimized financial losses through proactive risk management.
